SUMMARY

Full-Stack Engineer with 3+ years of experience building production insurtech and enterprise products end to end. At InsuranceMarket.ae (UAE and Bahrain), I built purchase journeys for 8 insurance lines, a business insurance platform, a Bahrain-market website, and an internal CRM with role-based access control. I worked across Next.js front ends, Node.js/NestJS services, payments, KYC/AML and third-party insurer integrations. I also build AI developer tooling: MCP servers and Claude Code plugins that let QA and content teams ship production changes through automated branch, preview and pull-request workflows.

EXPERIENCE

Full-Stack Engineer — InsuranceMarket.ae (Alfred Holdings)

Mar 2024 – Nov 2026

Remote · Dubai, UAE & Bahrain · Insurtech | Products: InsuranceMarket.ae, myAlfred, Alfred Holdings, FindMyNanny

Insurance purchase journeys (UAE)

- Built end-to-end purchase flows for 8 lines of business: car, travel, home, health, savings, life, cyber and smartphone insurance.
- Developed Node.js/NestJS services and REST APIs for lead submission, plan display, add-ons and online payment.
- Integrated third-party insurer and partner APIs to fetch quotes and push leads and policies across systems.
- Implemented KYC/AML verification in the purchase journey before policy issuance, plus email/OTP verification gates.
- Built CRM-linked document upload with AI-powered OCR that extracts customer details from uploaded documents automatically.

Bahrain market: website & CRM

- Built the Bahrain-market customer website and the internal CRM that runs the business's day-to-day operations.
- Designed and implemented role-based access control (RBAC): each role sees only the screens, actions and data it is permitted to, enforced on both the UI and the API layer.
- Implemented the CRM's core business workflows end to end, from lead intake through quotation and policy handling.

Business (SME) insurance platform

- Built the business insurance journey: lead form, cover picker, recommendations and multi-step application forms.
- Designed config-driven, reusable form sections so new covers can be added without forking code, scaling to 30+ covers.
- Wired all form fields to backend lookup APIs and agreed payload contracts with the backend team. Added OTP-gated pages and status-based routing.

AI developer tooling

- Built MCP (Model Context Protocol) servers and Claude Code plugins for SEO operations: page metadata, schema markup, navigation menu and llms.txt. Every change automatically creates a branch, builds a preview and opens a PR, so non-engineers can ship safe production changes.
- Built Foreman, an AI dev-agent plugin (requirements doc → plan → full-stack code → PR), and an AI page-generation agent that turns structured content JSON into published pages.
- Contributed to a multi-agent delivery pipeline (spec → plan → implementation → QA/security/performance review → PR) and maintained product knowledge bases kept in sync with the code.

SEO, performance & platform

- Built SEO landing pages for every line of business on headless WordPress with ISR and on-demand revalidation (270+ page content site). Shipped an automated sitemap to production.

- Connected the content site and transactional app using Next.js rewrites. Migrated Next.js 12 → 15 and added next-intl i18n (English/Arabic, RTL).
- Improved SEO, TTFB, payload size and Core Web Vitals across both apps. Moved responsive logic from JavaScript to mobile-first Tailwind CSS.

Frontend Engineer — Finosys Feb 2023 – Mar 2024

Onsite · Enterprise ERP

- Built data-intensive ERP dashboards (procurement, HR) and reusable React components for enterprise clients, including Dawlance.
- Optimized rendering performance and shipped analytics-driven UI updates consuming REST APIs.

React Native Developer — Chaynz Tech Jul 2022 – Jan 2023

- Built a multi-role food delivery app (vendor, customer, rider) with REST APIs, push notifications, Google Maps and QR.
- Delivered MVPs for startup and university clients.

Frontend Intern — Linkit Soft Jun 2021 – Nov 2021

- Built production UI modules with React, Redux, Tailwind CSS and REST APIs.

SKILLS

Frontend: React, Next.js (App Router), TypeScript, JavaScript, SSR/SSG/ISR, Redux Toolkit, Zustand, Tailwind CSS, MUI, Chakra UI, React Native, micro frontends, Yup, next-intl (RTL)

Backend: Node.js, NestJS, REST APIs, third-party API integration, payment integration, KYC/AML flows, CRM systems, RBAC, OTP verification, caching

AI & automation: MCP (Model Context Protocol) servers, Claude Code plugins & skills, LLM agent workflows (spec → plan → code → PR), multi-agent pipelines, AI page generation, AI-powered OCR, llms.txt / AI SEO

SEO & content: Technical SEO, Core Web Vitals, schema markup, sitemaps, headless WordPress, on-demand revalidation, Next.js rewrites

Tools & platform: Git, GitHub, Azure DevOps, Vercel, Playwright, Figma, ClickUp

EDUCATION

MS Computer Science — NED University of Engineering & Technology 2023 – 2025

BS Computer Science — NED University of Engineering & Technology 2018 – 2022
