SUMMARY

Full-stack engineer with a frontend focus, shipping React, Next.js and Node.js products since 2021: online purchase journeys, multi-step application platforms, enterprise dashboards, a three-role mobile delivery app, content sites built for SEO and Core Web Vitals, third-party and payment integrations, and AI developer tooling. Most recently at InsuranceMarket.ae, building bilingual (English/Arabic, RTL) products for the UAE and Bahrain. I own features end to end: requirements, API contracts, UI, services, tests and production.

PROJECTS

PolicyDesk: full-stack web app case study · live demo · code 2026

- Designed and built an insurance brokerage CRM from scratch: quotes, KYC/AML, documents, policies, payments and renewals across seven roles, deployed on Vercel with Neon Postgres.
- Next.js 15 Server Components and Server Actions, Drizzle, React Hook Form + Zod; database-driven permissions with data scopes in every query; English/Arabic with RTL.
- Built its own 54-component UI library with a docs-style component browser, lint rules that enforce the design system, and Playwright tests for every role.

CRM Kit: Claude Code plugin case study · code 2026

- Turned PolicyDesk's foundations into a reusable plugin: research, knowledge base, coding standard, build and tests for any industry, with tested Node.js scripts and a self-check.

EXPERIENCE

Full-Stack Engineer — InsuranceMarket.ae (Alfred Holdings) Mar 2024 – Nov 2026

Remote · Dubai, UAE & Bahrain · Insurtech | Products: InsuranceMarket.ae, myAlfred, Alfred Holdings, FindMyNanny

Online purchase journeys (UAE) case study

- Built end-to-end quote, compare and buy flows for 8 products: car, travel, home, health, savings, life, cyber and smartphone insurance.
- Developed Node.js/NestJS services and REST APIs for lead submission, plan display, add-ons and online payment.
- Integrated third-party insurer and partner APIs; added KYC/AML checks before issuance and email/OTP verification steps.
- Built document upload with AI-powered OCR that fills in customer details automatically.

Business (SME) insurance platform case study

- Built the lead form, cover picker, recommendations and long multi-step application forms.
- Designed config-driven, reusable form sections so a new cover is configuration instead of copied code, scaling to 30+ covers.
- Wired every field to backend lookup APIs with agreed payload contracts; added OTP-gated pages and status-based routing.

SEO, performance & platform case study

- Built a 270+ page content site on headless WordPress with ISR and on-demand revalidation, plus an automated sitemap.
- Joined the content site and transactional app under one domain with Next.js rewrites; migrated Next.js 12 → 15 and added next-intl (English/Arabic, RTL).
- Improved TTFB, payload size and Core Web Vitals; moved responsive logic from JavaScript to mobile-first Tailwind CSS.

AI developer tooling case study

- Built MCP servers and Claude Code plugins that turn plain-language SEO and content requests into code changes, each with a branch, a preview deployment and a pull request.
- Built Foreman, an AI dev-agent plugin (requirements → plan → full-stack code → PR), and an AI page-generation agent; contributed to a multi-agent delivery pipeline with QA, security and performance review.

Bahrain website & internal CRM case study

- Built the Bahrain-market customer website and the internal CRM, with role-based access enforced on both the UI and the API.

Frontend Engineer — Finosys case study

Feb 2023 – Mar 2024

Onsite · Enterprise ERP

- Built data-intensive ERP dashboards (procurement, HR) and reusable React components for enterprise clients, including Dawlance.
- Optimized rendering performance for large tables and charts, and shipped analytics-driven UI updates consuming REST APIs.

React Native Developer — Chaynz Tech case study

Jul 2022 – Jan 2023

- Built a multi-role food delivery app (customer, vendor, rider) with REST APIs, push notifications, Google Maps and QR.
- Delivered MVPs for startup and university clients.

Frontend Intern — Linkit Soft

Jun 2021 – Nov 2021

- Built production UI modules with React, Redux, Tailwind CSS and REST APIs.

SKILLS

Frontend: React, Next.js (App Router, Server Components), TypeScript, JavaScript, SSR/SSG/ISR, Tailwind CSS, design systems, React Hook Form, Zod/Yup, Redux Toolkit, Zustand, MUI, Chakra UI, React Native, next-intl (RTL), accessibility, micro frontends

Backend: Node.js, NestJS, Server Actions, REST APIs, PostgreSQL, Drizzle ORM, third-party and payment integrations, OTP and KYC/AML flows, role-based access control, caching

SEO & performance: Technical SEO, Core Web Vitals, schema markup, sitemaps, headless WordPress, on-demand revalidation, Next.js rewrites

AI & automation: MCP servers, Claude Code plugins & skills, LLM agent workflows, multi-agent pipelines, AI page generation, AI-powered OCR

Tools & platform: Git, GitHub Actions, Azure DevOps, Vercel, Neon, Playwright, Figma, ClickUp

EDUCATION

MS Computer Science — NED University of Engineering & Technology 2023 – 2025

BS Computer Science — NED University of Engineering & Technology 2018 – 2022
